

Postdoctoral Position

(Molecular Biotechnology Center, University of Torino, Italy)

A Doctoral/Post-doc position is available at the laboratory of Functional Genomics to investigate signal transduction events controlling adaptive remodelling in heart and to develop gene therapy translational approach based on cardiotropic adenoassociated vectors.

The project requires development of animal models and in vivo signalling studies. Experience in molecular and cell biology techniques, gene cloning, gene expression, signalling, is required.

Salary will be proportionate to the level of past research experience

To apply:

Submit Curriculum Vitae (CV) and a reference letter to:

Prof. Guido Tarone, guido.tarone@unito.it

or

Prof. Mara Brancaccio, mara.brancaccio@unito.it
